

Prime PS-3010SW Pallet Wrapper Scale

The Prime USA Scales PS-3010SW is a semi-automatic, low-profile pallet stretch wrapper machine, designed to efficiently fulfill pallet wrapping application needs. The PS-3010SW stretch wrapper stretches film up to 120% using clutch tension and dual rollers. It produces secure, consistent wraps, ensuring pallet load integrity and a professional appearance. The PS-3010SW is designed to eliminate poorly or inconsistently hand wrapped loads that result from operator fatigue, and it avoids the risk of back injury during hand wrapping. The PS-3010SW stretch wrapper offers adjustable settings to suit your pallets, including variable film carriage speed and turntable speed controls. The PS stretch wrapper line is available with integrated scale, extended wrap height, and larger turntable options. All Prime USA Scales stretch wrappers feature a heavy-duty frame and offer forklift channels for easy portability.

Features:

- Clutch tension setting provides up to 120% film stretch
- 30-40 Loads/hr., based on size, wrap pattern and options
- 5000 lbs Load capacity Manual film tension adjustment with clutch setting Turntable home and jog control for positive positioning
